

Just 4 out yesterday for an eventful event, mainly due to a partial transmitter failure, which turned out to be a broken swr/power meter indicating no output, so no dip for tuning ! Unfortunately this wasn't spotted and resolved until 30 min into the event, with approximate bearing and distance needed at the start.

Well done to Gary who finished in 42 min despite the lack of audible transmissions for 30 min. All of the competitors were well time-spaced out, but everyone found both the main Tx and the new getaway transmitter in the end. A pleasant hour was spent in the White Horse PH afterwards.

Next event dates TBC but around 21 July and 17 Aug.
